LOCKWOOD PADDE ES9000 12VDC TO 30VDC ELECTRIC STRIKE WITH 25KG PRE-LOAD

The ES9000 overcomes the real life issue of side pressure, commonly known as pre-load, easily opening with up to 25kg of pre-load applied to the strike. Pre-load is commonly caused by pulling on a door before it unlocks, by the weight of warped or drooping doors or by differential air pressure created by heating and cooling systems.

PA109001060

- Multi voltage 10 volts - 30 volts
- Weather resistant to IP54
- Field changeable fail safe/ fail secure
- Pre-load capacity of 25kg on lip
- 1300kg holding force
- SCEC approved
- 4 Hour fire rating

BORG 5000 SERIES

The Borg 5000 Series with its disabled access AS1428.1 compliant levers is designed for light to medium duty applications. Its full size lever handles and its large 10 digit keypad enables the 5401 to control access in a wide variety of applications.

Available with traditional code change or with on-door Easi-Code Pro code changing.

- Fully mechanical digital lock
- Disabled access AS1428.1 compliant clutching lever
- Traditional code change or Easi-code on-door code changing procedure
- 60 mm heavy duty tubular latch
- 12 mm bolt projection
- Passage function (removable if not required)

Your new search begins here

Search

A SMARTER, MORE PERSONALISED WAY TO SEARCH

We've upgraded our website search to help you find what you need faster. Powered by AI, it learns from how you use the site to deliver smarter, more relevant results.

Visit lsc.com.au & start your new search today!

WHAT'S NEW WITH SEARCH?

Faster, More Relevant Results

Our AI learns your needs, bringing the most useful results to the top—fast.

Smarter Suggestions

Try a few extra words. The AI adapts quickly to show better matches.

Personalised Experience

The more you search, the more it learns—delivering results just for you.

Dive Deeper with Categories

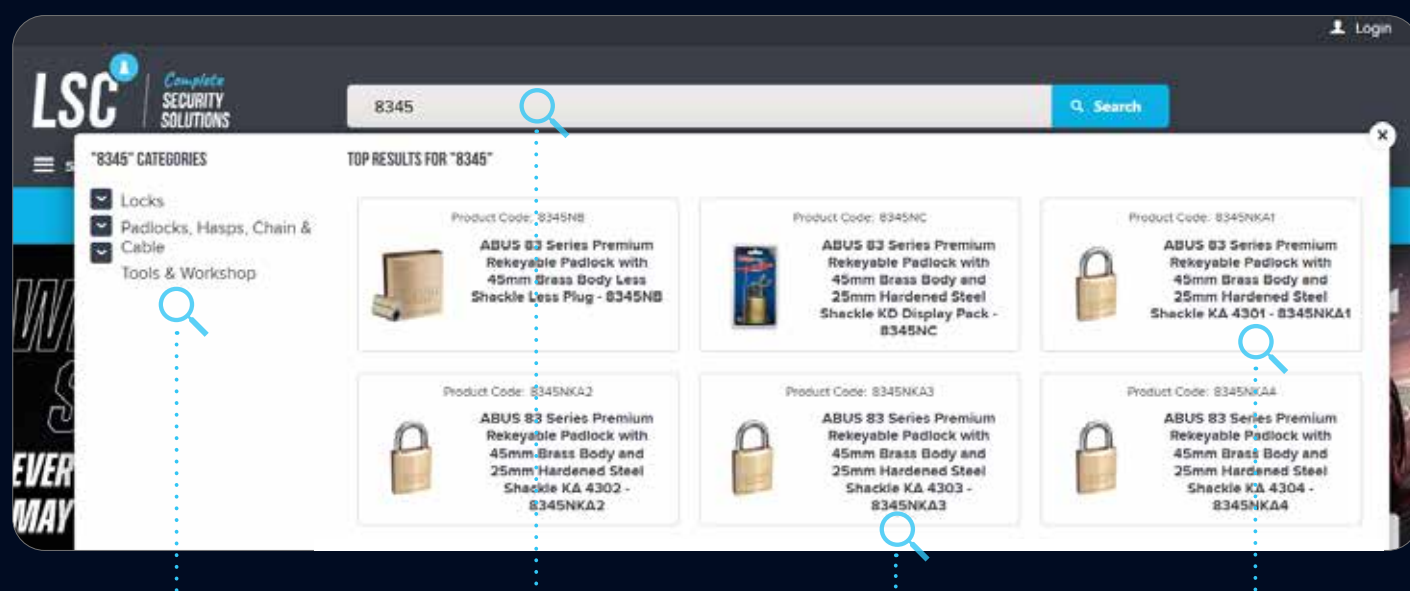

Refine by brand, category, or spec—now with smarter support behind it.

HOW IT WORKS

The AI behind the scenes uses 20+ models that learn from real search behaviour, just like how it learns to spot a cat by seeing enough examples. Over time, it identifies patterns in products, industry terms, and customer behaviour to deliver better, more personalised results.

ALWAYS IMPROVING

This is just the beginning. Our AI constantly learns, adapts, and evolves to support your needs—making product discovery smoother every day.

POWERFUL FILTERS

Refine your search by brand, spec, or category—now backed by smarter AI recommendations.

INSTANT SUGGESTIONS

Get helpful suggestions as you type, making it quicker to find exactly what you're looking for.

PERSONALISED RESULTS

The more you use it, the smarter it gets—relevant products move to the top, based on your activity.

SMART CORRECTIONS

Designed to deliver better results, even with minor spelling mistakes or variations in your search terms.

Yarrabilba State Secondary College: Smart Access Control for a Modern School

Yarrabilba State Secondary College is a progressive new school serving Logan City in southeast Queensland – a fast-growing corridor between Brisbane and the Gold Coast.

Since opening in 2020 with 250 students and 50 staff, the college has placed a strong emphasis on outdoor and project-based learning, with students frequently engaged in hands-on activities beyond the classroom.

01 The Challenge

At launch, the college relied on traditional locks and keys. But it quickly became apparent that this approach didn't suit the dynamic nature of the school day. Teachers were often required to move between multiple buildings, many carrying up to seven separate keys. This was not only inconvenient – especially while also managing laptops and learning materials – but also costly and cumbersome when keys were lost or staff moved on.

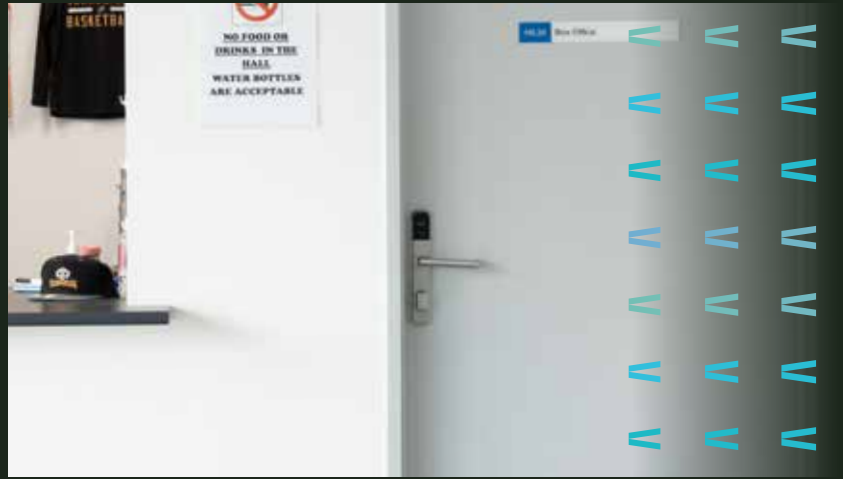

Security was another concern. With Yarrabilba offering state-of-the-art sports and arts facilities to the local community after hours, a way to grant controlled access to external users without compromising the safety of students and staff was essential.

02 The Solution

To address these challenges, Yarrabilba implemented a Salto Space smart access system. Using programmable keycards and wristband fobs, the system gives staff access to the areas they need based on their role, and external users access to specific facilities only at set times.

The flexibility of the Salto system means cards and fobs can be rapidly issued, modified or deactivated. If a credential is lost, it can be decommissioned instantly – no need to replace physical locks. Issuing a new fob is fast, inexpensive, and handled in-house.

Beyond access control, the same credentials are used for printing, scanning, and other shared services – reducing the need for staff to juggle multiple devices or IDs. Salto's audit trail feature also ensures school leadership can monitor who accessed which areas and when – a critical capability for managing both safety and transparency.

03 Key Benefits

Ease of Use

Teachers simply tap their wristband or card on the lock – especially handy when their hands are full.

Convenience

No more bulky sets of keys. Just one card or fob does it all.

Multi-Functionality

The same credential is used for door access, printing, and more.

Low Maintenance

Lost fobs are easily deactivated and replaced, with no locksmith callouts or rekeying.

Improved Security

Salto ensures only authorised users can access specific areas, with visibility into access events.

Support for Community Use

External groups can use the facilities securely after hours, without putting the rest of the school at risk.

Deputy Principal Janelle Whatmore sums it up

“Our staff love the Salto system, and from a management perspective, this system is really great and easy for us to use. We can control access, easily replace fobs when they’re lost, and can track and monitor who has accessed which areas.”

For more information, scan the QRs or visit saltosystems.com/en-au/industries/education-solution.

Master those tricky dimple & track keys with

SWIFT PLUS

Electronic machines are used for nearly all automotive or track key jobs these days, but from time to time there's still a need for a mechanical duplicator, typically for 'unusual' keys that don't have a proper card or code series associated with them.

With the ongoing rise in imported cylinders, customers were asking for a basic, economical yet reliable and accurate machine for duplicating 'ad-hoc' dimple or track keys used on a wide variety of applications.

Enter the Swift Plus. Compact yet powerful, the machine is packed with 40 years of Silca's experience with dimple and track keys, and is the ideal choice for businesses who need to duplicate exotic dimple or track keys.

- ✓ Illuminated work area
- ✓ Ergonomic and comfortable to use
- ✓ Clamp optimised for a wide range of keys
- ✓ Precise cutting with a sprung tracer point and adjustment ring for the tracer
- ✓ Practical accessories compartment for cutters

BDS TML25 UPGRADE

Following the release of the BDS TML25 in June 2022, the supplier has listened to industry feedback & end user experiences.

As a result, the supplier has recognised the need for improvements. The improvements have resulted in the standard TML25 being run out & replaced with 2 new models.

Whereas the TML25 model could be used for a Euro Cylinder & with a Borg digital lock, some issues were experienced from fitting & installation.

The new models are lock specific, one for use with a Euro cylinder & a separate one for use with a Borg Digital Lock.

The change means less alignment or binding issues from fitting.

NEW FROM SILCA: KEY IDENTIFICATION POWERED BY AI AND YOUR MOBILE PHONE

Any locksmith worth their salt will be able to recognise an LW4 key, and we're sure most locksmiths will tell us they're able to recognise hundreds of profiles by sight.

But what about those oddball keys?

What about when an apprentice is on the front counter?

Historically, that would have been the moment to open the catalogue and start burning time with manual key searching. You're wasting your own time, and that of your customer.

Those times are over – Silca's Profile Reader system consists of a special, scaled reading platform and light (called "Lumi"), and an Ai powered plugin to the Silca MKP App.

Together, they're used to identify key profiles in a few seconds.

It's reliable, easy to use, and economical— the hardware is your phone, and the smarts are in the Cloud.

Just Subscribe to the "Key Reader" plugin for MyKeysPro (either directly through the

App using the AppStore or Google Play, or by purchasing an access voucher from LSC), and set yourself up with the "Lumi" scaling lamp, and you're ready to go.

Key cutting is profitable when you identify the blank in seconds – and 90% of the time that should be the case. Make sure those special cases remain so by using Silca's Ai powered technology.

SECTECH ROADSHOW 2025 REVIEW

Throughout May, LSC were proud to support several of our partners who participated at the SecTech Roadshow. SecTech is one of our favourite events on the calendar, and although we didn't have a trade stand, we were proud to be there in support of the teams from **Dahua Technology, HID, ASSA ABLOY and Allegion.**

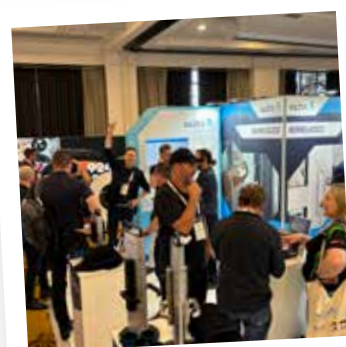

We were delighted to reunite and meet with customers, friends and colleagues from across the electronic security industry.

44TH ANNUAL MLAA CONFERENCE

Save the date

The 2025 National Conference will be held in **Sydney on 12-13 September 2025**. The Conference & Trade Expo will be held at The Fullerton Hotel Sydney, and the Gala Dinner & Awards night at the Sydney Town Hall. More details will be provided in the coming months, but for now, please save the date!
