THE INNOVATOR

Mark's Era

Mark's values:

- 1) Hire decent people*
- 2) Trust and believe in them*
- 3) Be of value to the customer*

The 1980s:

A Decade of Change

The 1980s were a decade of transformation for Australia and the security industry. Economic growth, corporate acquisitions, and significant market changes reshaped the way many businesses operated.

For decades, LSC had operated as both a locksmith supplier and a general hardware wholesaler. However, as large hardware chains and buying groups began to dominate the market, the traditional wholesale hardware sector started to disappear. Recognising where the future lay, LSC made the strategic decision to focus entirely on locksmithing and security products, this was an important step that helped shape the business we know today.

Competition within the locksmithing market was also intensifying. Key blank manufacturers such as Dominion Lock and Edmonds held strong positions across Australia, prompting LSC to strengthen its commitment to Italian manufacturer Silca. Throughout the decade, Silca's premium quality, innovation and product range became central to LSC's growth strategy.

One challenge remained: how to communicate with locksmiths across the country. At the time, there was no dedicated locksmithing publication and few opportunities to regularly connect with the industry.

That changed in September 1983 when LSC launched its monthly customer newsletter.

Created to share industry news, product updates and technical information, the publication quickly became an important industry resource. More than four decades and over 500 issues later, the newsletter remains a testament to LSC's commitment to keeping the industry informed, connected and up to date with the latest products, technologies and developments.

The 1980s also saw the rise of restricted key systems, with the introduction of the MLAA's J Series keyway. Designed by renowned locksmith, engineer and inventor John Andrew, the system provided locksmiths with an important restricted profile solution at a time when demand for key control was rapidly increasing.

Meanwhile, major international acquisitions were reshaping the industry. Global manufacturer Ilco acquired several key competitors, including Dominion Lock and later Clavis Industries (Edmonds Keys) in Australia. These moves brought increased competition and further reinforced LSC's commitment to partnering with leading global manufacturers while continuing to support the local locksmith industry.

By the end of the decade, LSC had emerged with a clearer focus, a stronger market position, and a growing national presence. The foundations laid during the 1980s would help shape the next chapter of the company's history.

NEW

BDS PREMIUM FARADAY BOX

Protect vehicles from keyless theft by blocking RFID signals that can be captured and amplified by thieves.

Lined with premium RF-shielding material, the box prevents signals from escaping, keeping keys secure when stored inside. It holds up to 6–8 key fobs, making it ideal for protecting spare keys and multiple

family vehicles in one convenient location.

Finished in premium PU leather with a quality shielded lining, the BDS Faraday Box offers a simple and effective way to give customers added peace of mind.

SILCA

SILCA

Silca Taggy – the key with the key tag built in

Offer your customers the unique, Made in Italy key that has the key tag built right in.

Save keyring clutter, reduce confusion, personalise and make it easier for your customers to grab the correct key every time, without fumbling or guesswork.

Made from Silca's famous brass alloy for smooth cutting and long life, and complimented by a special high tech polycarbonate that 'snaps' the tag securely closed, these keys are available in LW4, LW5 and TE2X, and in 5 colours.

ALL-IN-ONE, ELECTRONIC KEY CUTTING MACHINE

FUTURA M
SERIES

FUTURA *M* series

Silca's iconic key cutting machine is now faster, quieter and even easier to use.

Thanks to the familiar, easy to use and powerful software, the ability to cut virtually any key, in a single, compact, fast and reliable machine makes Future M-Series the go-to choice for you.

Futura M-Series features a double cutting station meaning flat, cruciform, laser and dimple keys, both residential and automotive, can all be cut using a single machine.

The wide range of optional accessories available further increases the machine's cutting capabilities allowing almost any residential and vehicle key on the market to be cut.

New with the Futura M-Series are an integrated monitor, new and quieter motors, and a carbide cutter. The tablet is gone, streamlining networking and updates, and removing the need to charge and manage a separate device.

FEATURES:

QUIET OPERATION

NEW CARBIDE CUTTER

Ethernet or single Wifi connection

All-in-one

CARBIDE CUTTER FOR FLAT KEYS

Featuring a special coating, this carbide cutter will last longer, and will cut thousands of keys - earning you big dollars before it needs replacement.

INTEGRATED MONITOR

Industrial-grade 10 inch, colour touch-screen display, adjustable to give the perfect view.

EASY TO USE SOFTWARE

Proven, familiar, intuitive user interface with one-touch software updates via the internet.

EvoX

Precision Key Cutting for Every Automotive Key

New features make it easier, reduce the chance of errors, and take the guesswork away.

Silca's new EvoX machine, the compact all-in-one solution for automotive keys is rapidly finding its way into many shops and vans.

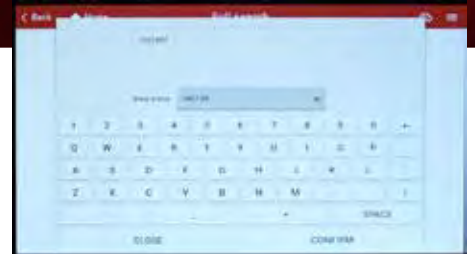

New software features have been developed in response to customer feedback, and a popular one is the new 'auto detection' for many tip aligned keys. You no longer need to use a specific tip-stop 'bar'; instead, align the key with the relevant position by eye, and the machine will 'detect' it and reference itself from there.

Another feature customers are loving is the 'base article search', which allows locksmiths to scan all available code cards for a particular mechanical profile. Previously, some cards were linked only to certain versions of keys, causing

confusion and misunderstanding. Think of it as a search for the "pure profile" of the key. For most professionals, it's easier to work backwards from the key profile, as the make -> model -> year database is often inaccurate or incomplete for our market.

Silca's unbeaten and unmatched card database is now easier to access than before, and when faced with all keys lost jobs, where an original key or key code isn't readily available, using the 'base article search' allows you to experiment with different versions of the lock using the same profile key.

Ask your Account Manager, or our Tech Support for more information.

NEW FROM SILCA: THE SWIFT 2.0

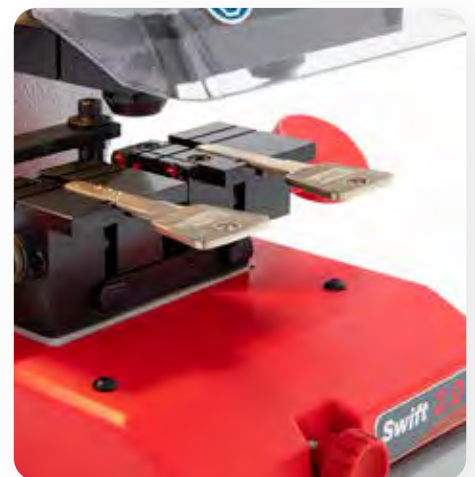

Dimple and track keys used to be found only in exotic high security applications, or for automotive use. With the automotive need covered by the Futura or EvoX machines, there's a growing need for cutting replacement keys to the rapidly increasing number of dimple keyed cylinders arriving on our shores.

The Swift 2.0 is a compact but feature packed machine, ideal for those oddball jobs where a drilling / vertical milling style machine is required.

Ideal for most track and dimple keys, the machine includes an LED light, easy to use controls, and a clever universal clamp to hold almost any kind of dimple or track key.

Make sure you're ready with one in your workshop or van.

LSC is also stocking a wider range of 'universal' track keys – you can use Silca's MyKeysPro (www.mykeyspro.com) to search, and you can search by dimensions – a handy tip to help you narrow the scope. Talk to your Account Manger if you need help, we are also adding keys based on customer requests.

“At LSC we all wish the Ross Family all the best with this wonderful achievement and hope there are many more years of this proud Australian owned manufacturing company” Mark Johnson

CELEBRATING 75 Years OF KJ ROSS SECURITY LOCKS

In an industry where much of the world’s lock and security hardware is now manufactured offshore, reaching 75 years of Australian manufacturing is a remarkable achievement.

This year, KJ Ross Security Locks celebrates its 75th anniversary, marking three-quarters of a century of innovation, craftsmanship and commitment to Australian-made security solutions. Established in 1951 by Keith Ross, KJ Ross has earned a reputation as one of Australia’s most respected manufacturers of locks, safe locks and specialised security products.

LSC is proud to have been part of that journey from the very beginning. As one of KJ Ross’ first customers in 1951, our relationship spans the entire history of the business and reflects a shared commitment to supporting the Australian locksmithing industry.

What began with Keith Ross painstakingly handcrafting combination locks, taking up to two weeks to produce a single lock using shell castings, balsa wood moulds and manually machined components, has evolved into a modern manufacturing operation embracing laser cutting, 3D printing and advanced production technologies. Throughout this transformation, KJ Ross has remained true to the values that have defined the business for generations: quality, innovation and a deep connection to the trade.

Today, the company continues under the leadership of second-generation family members Geoff, Bev and Graeme Ross, who remain dedicated to manufacturing security products in Australia and supporting locksmiths across the country.

K J Ross’s trademark products reflect decades of innovation, quality, and trusted security solutions.

From the pioneering **101-Series** Safe Lock in 1984, the company laid the foundation for its recognised lock designs.

The **600-Series** Safe Lock, introduced in 1992, brought international attention with its advanced resistance to forced entry and drilling.

The **700-Series** Safe Lock further strengthened the brand’s reputation, combining high security with prestigious VdS certification for European markets.

LSC recognise the importance of long-standing partnerships and the role they play in shaping our industry. Our relationship with KJ Ross is one built on mutual respect, shared values and a common belief in supporting Australian manufacturing.

Congratulations to the entire Ross family and team on reaching this significant milestone. We thank you for your partnership, your contribution to the locksmithing industry, and for 75 years of Australian innovation. We look forward to continuing the journey together for many years to come.

ROSS

ROSS

“Keith Ross and Stuart Johnson were in their twenties when they first started doing business and it is wonderful that the tradition continues with myself Geoff, Bev, and Graeme Ross” - Mark Johnson

101-Series Safe Lock

First introduced in early 1984, this lock was seen as the innovative base from which ROSS branded products of today are now seen. This 6-lever safe lock package was supplied with a weld-on coverstrap and a steel shouldered keyhole insert.

Designed for fixing onto all steel security containers and to resist forced entry through its strong steel construction and positive fixing. This was the first ROSS locking solution considered to have a market outside the domestic community. It was also the forerunner to the 102-Series safe lock we know today.

J ROSS CELEBR

600-Series Safe Lock

The arrival of the 600-Series safe lock in 1992 will be remembered as the event that caught the attention of the international community. Its arrival provided an opportunity to present an advanced safe lock design that endeavoured to eliminate the conventional lock weakness and obstruct the traditional opening and drilling intrusion techniques.

Vertical lift levers, housed and anchored securely between the steel lock case and cap, restricts a forced entry. As a rebranded product, the roll-out throughout the world was a great success; closely followed by the traditional Australasian market support that was always present.

700-Series Safe Lock

The mid-1990's saw the roll-out of digital locking solutions take hold throughout the world. However, not all agreed with the idea this digital trend provided all the answers. The lack of access to (High Security) keylock options with the same digital footprint led to the introduction of the 700-Series safe lock.

Based on the successful roll-out of the 600-Series design; this supercharged high-security 700-Series safe lock was rolled-out in late 1997. Most importantly, this lock was granted the prestigious (VdS) certification in recognition of factory manufacturing standards and in support of the European market requirements.

Today, the 700-Series safe lock remains first choice when quality and high-security are mentioned in the same sentence.

ADI 802 SERIES LOCKING BARS

ADI locking bars are suitable for use in industrial and commercial buildings, institutions, clubs, schools, hospitals, hotels and similar buildings. High security multi-point locking devices that can be mounted horizontally to any solid core door.

- Lockable, Top Pull latch attachment
- Provides a corrosion resistant, unsurpassed public safety system
- Universal release knob, for easy operation and child safety
- Can be locked when not in use
- Rekeyable 6 pin Lockwood barrel

HAMILTON

McGrath Smart Locks to commence Melbourne production of Hamilton

McGrath Smart Locks is proud to announce that the Hamilton smart lock has officially achieved Australian Made certification and can now carry the iconic **Australian Made logo**.

24 MONTH WARRANTY IP66 WATER RESISTANT

FIRE-RATED DDA COMPLIANT

For locksmiths and security professionals, the certification provides another compelling reason to recommend the Hamilton to customers seeking a smart locking solution designed specifically for Australian conditions. The Australian Made logo is one of the country’s most recognised and trusted symbols, giving end users confidence that they are investing in a product developed for the local market.

“This certification is an exciting milestone for the brand and reinforces our commitment to delivering smart locking solutions designed for Australian conditions,” said Graeme McGrath.

Built to withstand harsh sun, coastal environments, dust, dirt and heavy daily use, the Hamilton has earned a reputation as a reliable smart locking solution for Australian homes and businesses.

For LSC customers, Australian Made certification provides an additional point of difference at the counter, helping create conversations around local innovation, quality and trust. As more consumers actively seek Australian Made products, the Hamilton offers security professionals the opportunity to supply a smart lock backed by both strong performance and a recognised symbol of Australian authenticity.

Understanding Offline Access in SALTO KS

When businesses consider cloud-based access control, one of the first questions they ask is:

What happens if the internet goes down?

It's a fair question — and one that SALTO KS is designed to answer with confidence.

Even if a site temporarily loses internet connection, SALTO KS locks can continue granting access to authorised users using credential information already stored securely in the lock.

That means day-to-day operations can continue without unnecessary disruption while connectivity is restored.

Built for Real-World Reliability

SALTO KS combines the convenience of cloud-based access management with the reassurance of dependable offline operation.

At the centre of the system is the IQ, which connects the cloud to the locks and keeps updates, user changes and permissions in sync. But if communication is interrupted, the locks don't stop working — they continue to recognise approved credentials locally.

Offline Access Supports Multiple Credential Types

Offline access can be used with:

- Digital Keys
- PIN codes
- Tags and key cards

PIN access is enabled automatically, while Digital Keys and tags can be activated by the Site Admin where needed.

Peace of Mind for Customers

For customers new to cloud-based access control, this feature provides valuable reassurance. SALTO KS has been built with real-world conditions in mind, helping businesses stay secure, accessible and operational even during temporary connectivity issues.

Cloud Convenience, Without the Worry

Whether it's a small office, gym, apartment building or shared workspace, SALTO KS delivers the flexibility of cloud management with the reliability customers expect from a secure access solution.

WHAT'S IN THE TOOL BOX?

ABUS Shackle change tool
Don't be caught without one, shackles can be changed in seconds with this tool, there's also a keyring mountable version 83NSCALTOOL

HAPPY CUSTOMERS

DAVID CARR LOCKSMITHS & SECURITY (NSW)

Smiles all round with the new McGrath Smart Locks A-Frame sign now in place at David Carr Locksmiths & Security. The sign is helping showcase the range and drive interest from customers.

SECURE LOCKSMITHS & SECURITY (SA)

Filippo from Secure Locksmiths & Security is stoked with his purchase of Silca's NEW Futura M400. The commercial grade built-in touch-screen is the real deal!

MOUNT GAMBIER LOCKSMITHS (SA)

Scott from Mount Gambier Locksmiths was happy to share his most recent McGrath Smart Lock install.

Replacing flick-up bolts on narrow frames has often caused issues in the past with the new lock hitting on the door jamb.

Thanks to the narrow design of the Hamilton and the 33mm backset of the Parasol mortice lock, this was a perfect fit - with no cutting into the frame required!

The customer paired the lock with a McGrath remote for staff sitting behind the office desk, and they were further impressed with the speed and responsiveness of this solution.

Happy customer, happy Locksmith. Well done, Scott!

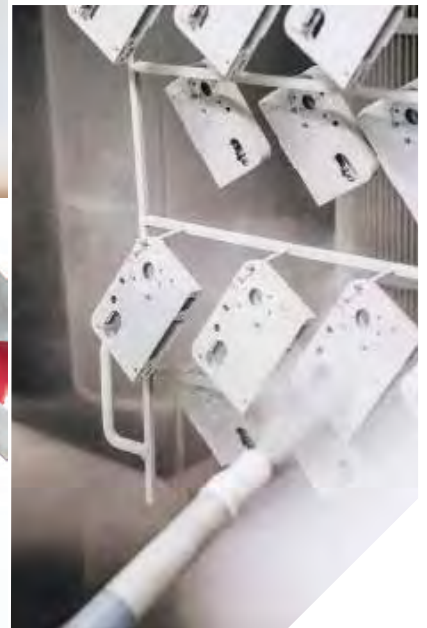

ASSA ABLOY

Quality YOU CAN Trust

When you choose Lockwood, you're not just choosing hardware - **you're choosing a legacy.**
