Small Business loves SALTO KS – just ask The Wool Mill Centre

Servicing the access control needs of your SME customers means minimizing risks, without the high costs associated with implementation, management or maintenance. They demand simplicity, ease of use, and internet-based management.

Enter SALTO KS. Easy to install, your customers can manage cloud-based access control from anywhere, on-the-go, simply by using the KS app or a web browser. They can send a mobile key to anyone with a smartphone, with no need to hand over tags or even do a remote opening (though you can do that too!). Issuing and receiving access has never been easier.

> **"**
>
> **Once we saw the product, we knew it was perfect for us. SALTO have a wireless lock option, which instantly did away with our cabling issue. The XS4 Mini locks are well designed, and are a great aesthetic fit with our internal building style**

> The Wool Mill Centre **"**

SALTO AND LSC

To get started with SALTO KS, LSC can help you with pre-sales support to system implementation – just ask.

Being cloud-based, there's no need to purchase software licenses, install and manage complicated and expensive IT equipment, or worry about ongoing maintenance and back-ups. Instead, customers unlock the functionality of their account with a one year KS subscription - so you earn while you sleep each time they renew.

And customers, such as The Wool Mill Centre, love it. Formerly a working mill, John Kallitsas, Managing Director, refurbished it into a state of the art co-working space.

"Once we saw the product, we knew it was perfect for us," says John. "SALTO have a wireless lock option, which instantly did away with our cabling issue. The XS4 Mini locks are well designed, and are a great aesthetic fit with our internal building style."

Tenants access the building and their dedicated offices with a key card or using their mobile phone as a credential. For visitors, the front main entry door has an intercom connected to individual rooms, and tenants can let their guests in using the SALTO KS app on their phone.

The installation was managed smoothly by SALTO partner JTW Security. James West, Director, agrees that SALTO was the perfect fit for this project: "With a refurbishment of an old building like this, a wireless solution is essential", he said. "Running cables would have been almost impossible, not to mention expensive."

NEW SILCA UNOCODE F-SER

Discover The New
UNOCODE F SERIES
Visit **unocodefseries.com**
TRUSTED
BRAND

When Silca launched the first quality electronic code machine in 1988, it revolutionised the industry. The Unocode quickly became the machine of choice and was recognised as the industry standard for performance, reliability and ease of use.

Revised and updated in 1999, 2002, 2008 and most recently in 2016, now it's time for a completely new Unocode: F-Series.

New from the ground up, no single component escaped revision and upgrading. A dedicated team of 50 engineers invested more than 30,000 hours in the new machine. Hundreds of new drawings were made, parts designed, tested, revised and tested again over four years - and the result has arrived: Unocode F-Series. Available in a variety of models, the machine is designed to perform to the very highest standards and appeal to the most professional locksmiths. Automate, speed and simplify your operation in one hit.

Camera decoder

Robot loader

Feeder

LSC House of Trusted Brands

RIES MACHINERY PLATFORM

The machine includes on board software and codes for completely stand-alone use, and advanced functions can be achieved by pairing it with a PC via Ethernet or Wifi. New and innovative features include optional rotary engraving on both sides of the key, an optional electromechanical automatic feeder and FIFO sorter, and an optional high-resolution camera for fast decoding. Cutters, clamps, carriages, electronics, the

chassis and shield are all upgraded and feature the latest technology to reduce noise and vibration while improving speed and performance.

All functions are controlled from an integrated industrial touch-screen (the same one found on the SmartPro).

A range of models is available to suit every business:

| Description	Camera Decoder	Engraving	Feeder
Silca Key Machine Unocode F-Series F100	No	No	No
Silca Key Machine Unocode F-Series F400	Yes	No	Optional
Silca Key Machine Unocode F-Series F600	Yes	Yes	Optional
Silca Key Machine Unocode F-Series F800	No	Yes	Yes
Silca Key Machine Unocode F-Series F900	Yes	Yes	Yes

The F100 replaces the Unocode 299, and is the entry-level machine for cutting inline automotive, residential and restricted keys to code.

The F400 adds the digital camera for decoding, and can be considered an upgraded version of the Unocode 399. This machine can have the Feeder & FIFO sorter added later if required.

The F600 adds automatic rotary engraving on both sides of the key, the Feeder & FIFO sorter can be added later if required.

The F800 includes engraving and the automatic feeder and FIFO sorter, but removes the digital camera for decoding – this is the machine to use if you want to automate and streamline your MK production. You can load up keys for cutting and engraving, and walk away while the machine does the complete job, fully automatically, and the keys will be neatly stacked – cut AND engraved at the end of the job.

The F900 is the top model and included all available features.
